

Description: Metropolitan Church

The congregation grew faster than anticipated consequently Noslar T.I., Inc was hired to consult, design and to provide integration services.

Various large front projection system with installed and five 50" plasmas were installed. The cabling infrastructure was laid out for professional camera connection and building wide intercom.

A video/audio production control center was installed to record and televise sermons as well as other presentations. An advance audio mixing and lighting control system was also integrated to complete the operational requirements.

The church can now televise, telecast via the web, produce, edit and archive all the presentations and sermons.

The technology has always the church to reach more members and increase the total attendance beyond expectations.
